

Team Florida Strangler App - To Gather

Team Members:

Michael Schmittlein

John O'Brien

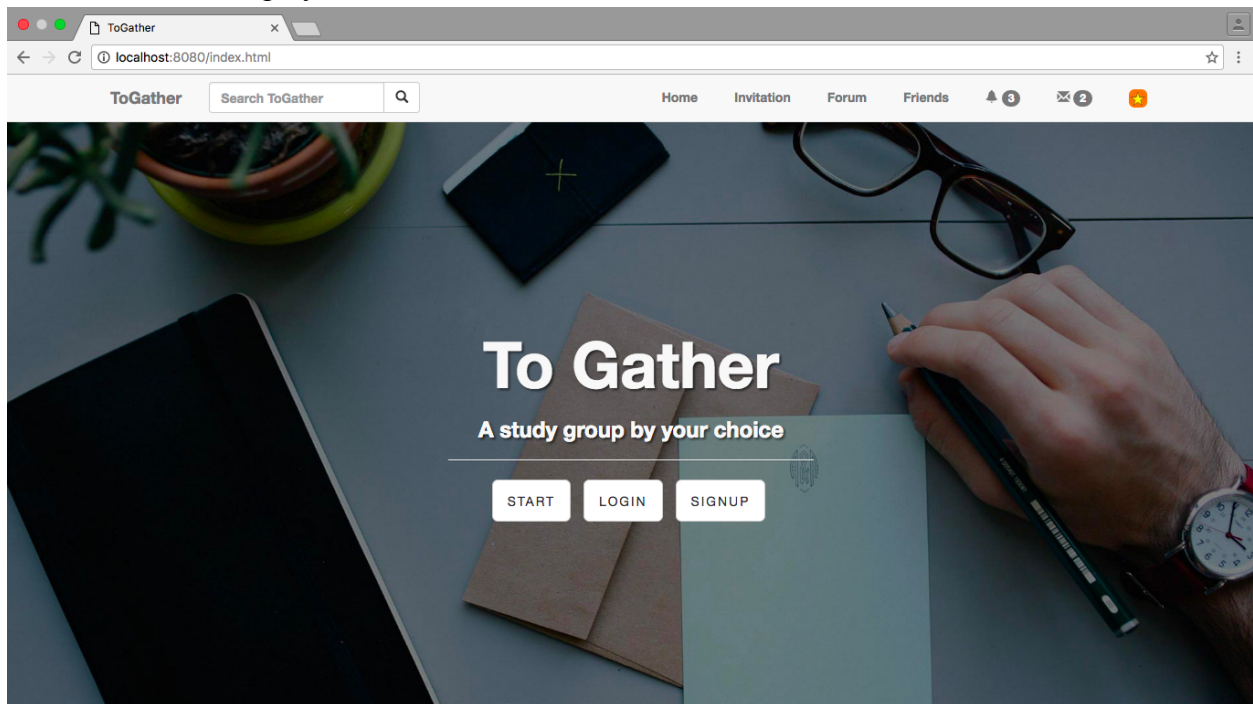

Minxin Gao

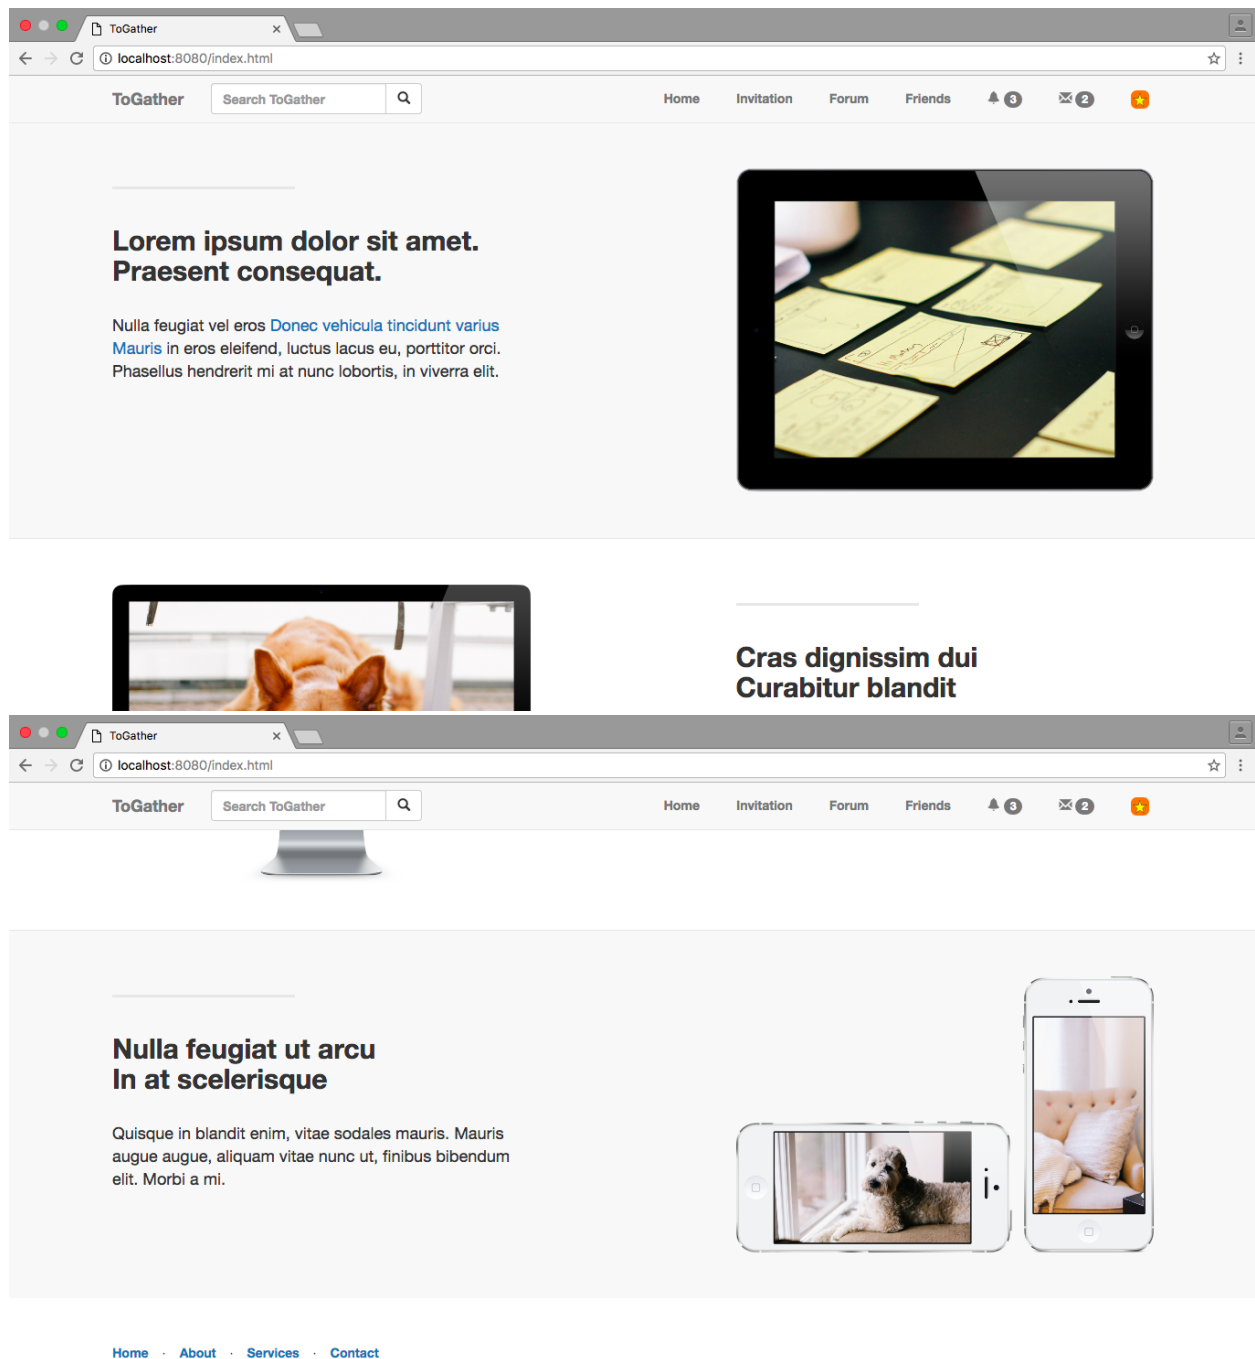

Elvis Chen

Andy Liu

Home Page:

The home page is based on the Start Bootstrap credited to David Miller under MIT license. Our home page took the structure of the original design, modified and added on some unique features, such as search field, notification and message drop down menu, etc. Home page consists of navigation bar in the top, followed by a full screen start display, followed by three sections of news display and footer.

The other pages are linked to the navigation bar in the home page and the navigation bar is used on every html file we have so that user can easily go wherever they want. The structure of the web application is very clear.

Forum:

The forum can be opened anywhere by clicking on the navigation bar on fixed on the top on every webpages. It is a place where people can post threads to look for a group, and where discussion can be made. There buttons with different page number and next page button. The New Thread button takes the user to the bottom of the website where user can input their thread name and the body of the thread. The forum keeps track of who post the thread, when the thread is posted, the views and replies count of the thread, and who replied last with time.

Friends:

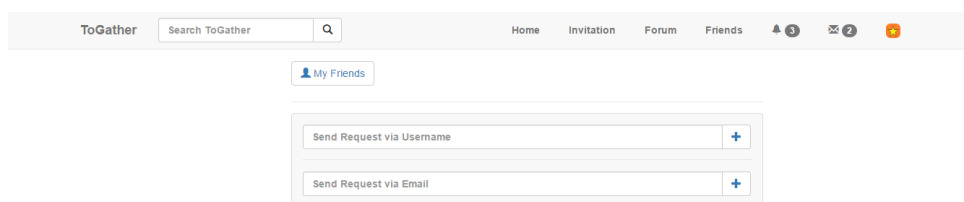

Friends consists of two pages, one for 'My Friends', and one for 'Add Friend'. The My Friends page will open when the friends button is clicked from the home page. There is a button at the top to go to the Add Friends page. The main body of this page is the list of friends. Each friend will have a profile picture next to their name, the name of the school they attend, a list of groups the friend has in common with the user, and an option to send a message to the friend.

Screenshot of My Friends page:

When you click on the Add Friend button from the my friends page, the add friends page will appear. The add friend page consists of two options, friending someone by their username, or friending someone by their email address.

Screenshot of Add Friends page:

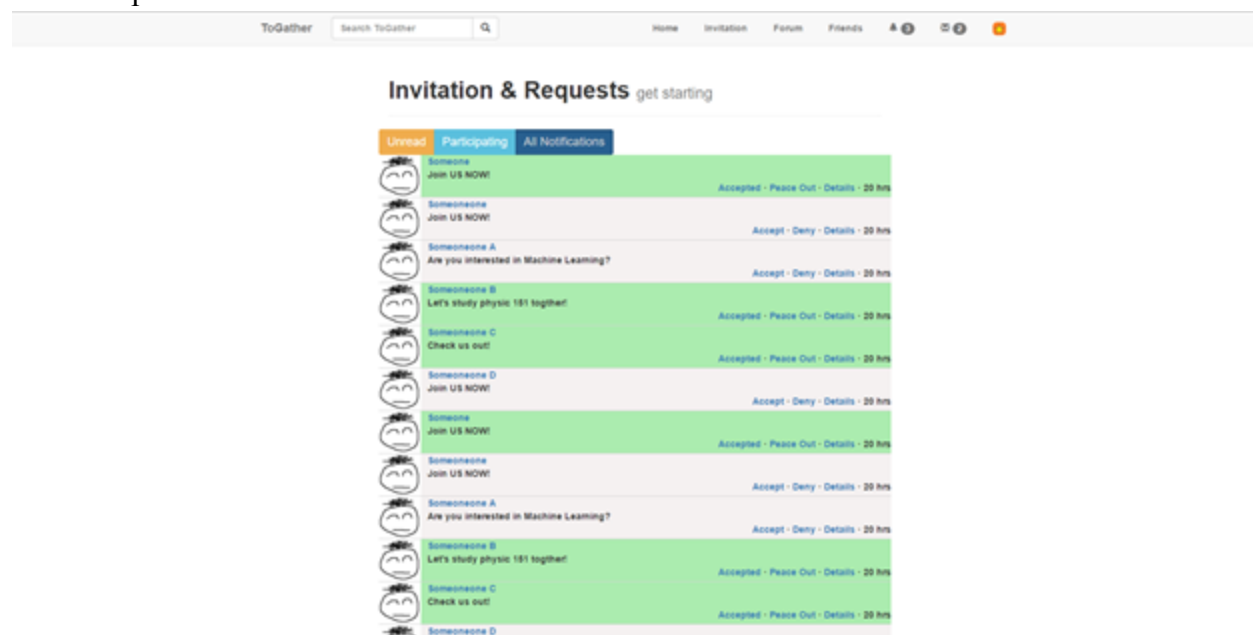

Invitation:

This page is notifications.html

Screen N-1:

This is what users will see when they go to the notifications page. It is set to default to show every notification, and it allows multiple pages of notifications to exit which the users should be able to access all their notifications in the past. Each notification would only show the title, the name and profile pictures of the notification creator. If users want detail on each notification, they can click on the “detail” button for more detail, and it is explained at Screen N-2. At the moment, notifications per page is set to be 12, but it is subjected to change. The breaking point of navbar collapse is changed to accommodate the longer navbar, which navbar will collapse sooner.

N-1

Screen N-2:

Users can check the detail of each notifications/events by clicking “detail” button, and they will also be able to accept or leave events with the corresponding buttons. The screenshot shows what happens when “detail” is clicked. The details of an event and the event creator, it is isolated in modal form for clearer view.

N-2

Account:

The account page displays the user's username along with a custom profile picture of their choosing. Below that all of the user's information is displayed, including their name, e-mail, major, grade, and a brief description of who they are. Then below that is a form in which the user can make changes to any of the information displayed above it. Once the user had filled in one or more fields in which they want to change, they can click the submit button located right below the forms.

My Account

Username

User Information:

First Name:	John	Last name:	Doe
E-mail	jdoe@example.com		
Grade	Senior	Major	Computer Science
Description	This is me.

Submit

Search Result and Group Page:

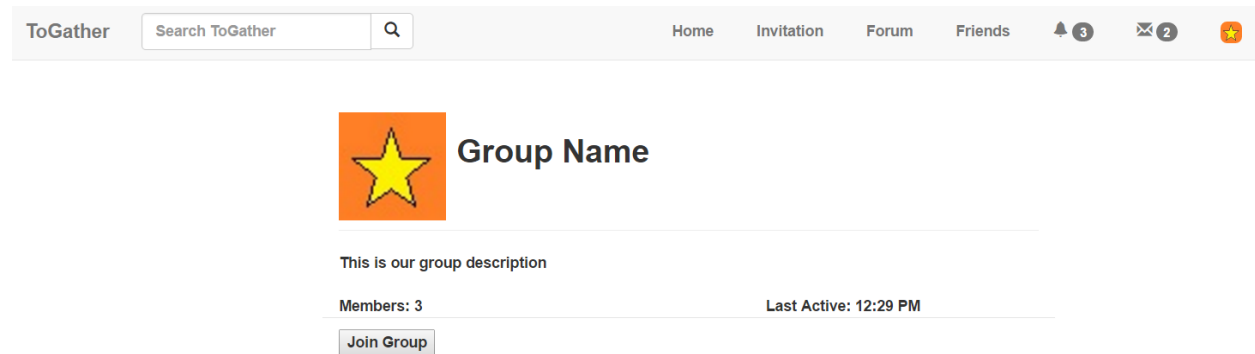

The search result page is reached once the user makes a search from the top navbar. The page displays a header showing what was searched along with the number of results. Below that is a bullet list of links to groups along with a description underneath, each link leads to the group's respective page.

Search Results

1337 results found for "Machine Learning group"

- [result 4](#)
description
- [result 5](#)
description

The group page displays the group name along with a group profile picture. Then a description is displayed along with the number of members of that group and the last time the group was active. Below that is a button the user can click in order to join the group.

Individual Contribution:

Michael Schmittlein:

- Created friends_add_friend.html and friends_my_friends.html
- Created friend.css

John O'Brien:

- Created account.html and account.css
- Modified group_result.html
- Created group_result.css
- Created group_page.html & group_page.css

Minxin Gao:

- Created forum.html & forum.css
- Created first version of top navigation bar
- Minor text fixes

Elvis Chen:

- Created index.html and index.css.
- Applied navigation bar to every html file
- Whole site styling and bug fixing.
- Reconstructed two friends page
- Constructed template page for group result and group page

Andy Liu:

- Created notifications.html and notifications.css.
- Created navbar-fixer.css to change navbar-top collapse point.
- Bug fixes.
